

From signup to your first strategy in 5 minutes

Seven steps. No code. No spreadsheets. Test on paper money first, then go live when you're ready.

1

Sign in (30 sec)

Go to <https://depthsight.diverseinc.net/login>. Use the email/password from your welcome email, or click **Continue with Google**.

2

Open the Hub (10 sec)

Click **Hub** in the left sidebar. You'll see 7 verified strategy templates — each is a complete, working strategy you can use as-is.

3

Pick one and import (30 sec)

Click **Use Template** on any strategy. **RSI Breakout v2** is the most popular starting point. The strategy loads in the editor with all the configuration done for you.

4

Try the AI Co-pilot (1 min)

In the editor, find the AI Co-pilot panel. Type a strategy idea in plain English and click **Generate**. You'll get a complete strategy config in 3-8 seconds. Apply it to your editor.

5

Run on paper trading (instant)

At the top of the editor, set mode = **Paper** (no real money). Click **Start**. The strategy runs against live market data with **\$10,000 fake USDT**. Watch it in the dashboard.

6

Connect exchange (when ready, 2 min)

Settings → **API Keys** → **Add Exchange Key** → Binance or Bybit. Create a key on the exchange with **read + trade** permission (NOT withdraw), paste it here. The system validates it in seconds.

7

Switch to live (when confident)

In the editor, switch from **Paper** to **Live**. Click **Start**. Real trades on the real exchange. Start small (2-5% position size) and scale up as the strategy proves itself.

That's it. You're trading.
